A NFA or NFAA has not been agreed to by us.

Based on the information provided at the meeting we agreed that it did not look like further actions were warranted for B771, but not necessarily for B774, where VOCs and Am/Pu had been identified. We were also told that an additional sample was being collected next to the big Am detection. As such, we wanted to be able to review this data, as well as the additional results of the sample being collected before making any decision regarding NFA or NFAA.

As yet, we have not been provided results for any additional sampling that has been performed.
